

Terms & Conditions

The commercial terms on which Gurukrupa Powertech Solutions quotes, supplies, installs and supports rooftop solar systems in Gujarat — including exactly whose warranty covers what, who pays for a replacement, and where our responsibility ends and PGVCL's or the Government of India's begins. Written to be read before you buy, not after something fails.

🕒 Effective 18 August 2026

📄 Version 2.1

🏛️ Jurisdiction: Bhuj, Gujarat

🏠 On-Grid & Hybrid solar EPC

THE SHORT VERSION

Four things worth knowing before you read the rest

Product warranties are the manufacturer's

Panels and inverters are warranted by Waaree, Adani, UTL, Solaryaan or Polycab — not by us. We register and chase every claim for you at no charge, but we are not the warrantor.

A free replacement is free material only

The OEM supplies the part at no cost. Un-mounting, re-installation labour and freight are yours to bear after the first year. Nobody in this industry pays those for you.

PGVCL and the subsidy run on their own clock

We file the applications and stay on the file. We cannot commit to a date for a feasibility approval, a net meter, or a subsidy credit, because none of those three are ours to give.

Warranties cover defects, not weather

Hail, cyclone, lightning surge, monkeys and theft are excluded by every OEM in this market. That gap is closed with insurance, and we will tell you so in writing.

This summary is a reading aid. It does not replace the clauses below, and where the two differ, the clauses govern.

CLAUSE 1

Scope & acceptance

These terms govern your use of this website and the commercial relationship between you and Gurukrupa Powertech Solutions for the supply and installation of rooftop solar systems.

By using this website, submitting an enquiry, requesting a quotation or accepting a proposal from us, you agree to these terms. If you do not agree with them, please do not use the quotation tool or proceed with an order.

We are a solar EPC contractor operating in Gujarat, supplying On-Grid and Hybrid systems to residential, commercial and institutional customers, primarily within the PGVCL licence area.

You agree that acceptance given electronically — by email, WhatsApp, or by signing a digital copy — is as binding as a wet signature, in accordance with the Information Technology Act, 2000.

Where a signed work order exists, it prevails

These terms apply to everyone who uses the site. Once you place an order, the signed work order, its annexures and the technical specification sheet become the contract for that installation. Where a work order says something different from this page, **the work order governs** — and if it is silent, this page fills the gap.

CLAUSE 2

Definitions

Terms used throughout this document, in the sense the industry uses them.

- **OEM** — Original Equipment Manufacturer. The company that made a component and issued its warranty: Waaree or Adani for modules, UTL, Solaryaan or Polycab for inverters.
- **EPC** — Engineering, Procurement and Construction. Our role: we design the system, buy the components, and install and commission them.
- **DISCOM / PGVCL** — the electricity distribution company. Across Kutch and western Gujarat this is Paschim Gujarat Vij Company Limited.
- **Net metering** — the arrangement under which a bidirectional meter, supplied and owned by the DISCOM, records both the units you draw and the units you export.
- **Commissioning** — the point at which the installed system has passed DISCOM inspection, the net meter is in place, and the system is formally energised. Warranty periods run from this date.
- **PM Surya Ghar / CFA** — the Central Financial Assistance paid under the PM Surya Ghar: Muft Bijli Yojana, credited to an eligible residential consumer's bank account after commissioning.

- **DCR** — Domestic Content Requirement. Modules with both cells and modules made in India, a hard eligibility condition for the residential subsidy.
- **ALMM** — the Approved List of Models and Manufacturers maintained by the Ministry of New and Renewable Energy.
- **STC** — Standard Test Conditions. The laboratory reference conditions against which a module's rated output is measured, and against which performance warranties are assessed.
- **On-site warranty** — a warranty under which the manufacturer's own engineer attends your premises. **Carry-in warranty** — one under which the item must be delivered to the manufacturer's service centre. The difference decides who pays freight, and it is stated on your certificate.

CLAUSE 3

Online estimates are non-binding

The figure our quotation tool returns is a preliminary estimate. It is not an offer, a contract, or a price we are bound to hold.

Our calculator sizes a system from the inputs you provide — your bill figures, appliance list or backup requirement — and prices it against standard component rates. It is designed to give you an honest order of magnitude in sixty seconds, and it is deliberately built to show the subsidy already deducted so you see a net figure rather than a headline one.

What it cannot do is see your roof. The actual price depends on:

- Roof structure, orientation, available shadow-free area and load-bearing capacity.
- Shading from adjacent buildings, parapets, water tanks and trees.
- Cable route length from the array to your distribution board, and the condition of that board.
- Your sanctioned load and connection phase, which cap the capacity PGVCL will approve.
- Structure height and any elevated or non-standard mounting your roof requires.
- Prevailing component and freight prices on the date of order.

A physical site survey by our engineer is required before any firm price is issued. Until then, treat every number on this website — including generation and savings figures — as indicative.

CLAUSE 4

Site survey & final proposal

The survey is where the estimate becomes a price, and where we tell you if your roof is not suitable.

We will survey the site, measure the usable area, assess shading across the day, check the sanctioned load on your electricity bill and inspect the earthing and distribution board. You then receive a written proposal listing the exact make and model of every major component, the structure specification, the scope of work, the price, the payment schedule and the expected timeline.

If the survey shows your roof cannot carry the system, that the shadow-free area is insufficient, or that your sanctioned load will not support the capacity you want, we will say so and tell you what would need to change. We would rather lose an order than install a system that will underperform for twenty-five years.

A proposal is open for acceptance for the period stated on it. After that it lapses and requires re-pricing, because component costs move.

CLAUSE 5

Pricing, taxes & payment

Prices are quoted in Indian Rupees and are valid for the period stated on the proposal.

- **Taxes.** GST is charged at the rate applicable to solar power generating systems and to the services element on the date of invoice, and is shown separately on the invoice. Where a statutory rate changes between order and invoice, the rate in force on the invoice date applies.
- **Payment schedule.** As set out in the work order — typically an advance against order, a stage payment against material delivery at site, and the balance on commissioning. We do not begin procurement against an unpaid order.
- **The subsidy is not a discount.** We will never adjust the PM Surya Ghar amount against your invoice or offer it to you upfront. You pay the full contracted price; the Government credits the subsidy directly to your bank account after commissioning. Anyone offering it as an upfront discount has priced a risk they do not control and moved it to you.
- **Delayed payment.** Material stored at our premises beyond the agreed schedule, and work held at your instruction, remain at your cost and risk.
- **Price validity.** Where the order is delayed beyond the proposal validity for reasons not attributable to us, the price is subject to revision against prevailing component costs.

Pay the company, never an individual

All payments must be made to the Gurukrupa Powertech Solutions bank account named on your invoice, by cheque, NEFT, RTGS or UPI, and you must receive a GST invoice or a numbered receipt for every payment.

Do not pay cash into any personal account, to any individual's UPI handle, or to any account not printed on our invoice — not to an employee, not to a technician, not to anyone introducing

themselves as our agent. We take no responsibility for money paid outside this method. If anyone asks you to, call us on [+91 97259 76717](tel:+919725976717) before paying.

CLAUSE 6

Scope of supply & exclusions

Our price covers what is listed in the work order. These items commonly sit outside it.

Unless your work order expressly includes them, the following are excluded and, where needed, are charged separately or arranged by you:

- Civil work — foundations, pedestals, waterproofing, roof repair or strengthening.
- Upgrading the existing distribution board, earthing pit or internal wiring where it is found unfit at survey.
- Any charge levied by PGVCL: application, processing, meter, testing, security deposit or load-enhancement fees.
- Charges for enhancement of sanctioned load, or for converting a single-phase connection to three-phase.
- Tree cutting or removal of any obstruction causing shading, including obtaining permission for it.
- Lightning protection beyond the standard earthing and SPD scope stated in the work order.
- Fencing, module cleaning systems, remote monitoring subscriptions beyond the included term, and DG interfacing.
- Storage of material at site, and site security, once material has been delivered and accepted.

CLAUSE 7

Title, risk & site readiness

When the equipment becomes yours, when it becomes your risk, and what happens if the site is not ready for us.

- **Title.** Ownership of the supplied equipment passes to you on receipt of payment in full. Until then the material remains our property, even where it is already at your site.
- **Risk.** Risk of loss or damage passes to you on delivery of material to your site. From that point the material is in your custody, and we recommend you confirm your property insurance covers material stored on site before installation completes.
- **Site readiness.** You are responsible for providing clear, safe roof access, a temporary power supply, a water point, and space to store material securely. Where our team attends and cannot

work because the site is not ready, that visit is chargeable and the schedule moves.

- **Delays not attributable to us.** Timelines quoted assume approvals arrive, the site is available and payments are on schedule. We are not liable for delay caused by DISCOM processing, subsidy portal processing, your own scheduling, or force majeure under clause 21.
- **Damage to existing structure.** Installation involves drilling and fixing to your roof. We work to standard practice and make good our own penetrations, but we do not accept liability for pre-existing defects in the building, or for latent weakness in a structure we were not asked to certify.
- **Our personnel.** Our technicians remain our responsibility, including their statutory entitlements and safety at your site. You are asked to keep the working area clear of children, animals and obstruction while work is in progress.

CLAUSE 8

Warranty structure — two separate things

Your system carries two distinct warranties from two distinct parties. Confusing them is the single most common cause of dispute in this industry.

ISSUED BY THE OEM

Product & performance warranties

Cover the equipment itself — manufacturing defects and guaranteed power output. The contract is between you and the manufacturer, evidenced by the warranty certificate issued against your serial numbers.

ISSUED BY US

Workmanship warranty — 1 year

Covers our own work: mounting, wiring, terminations, earthing, structure erection and commissioning. Runs for one year from the commissioning date.

Gurukrupa Powertech Solutions is not the warrantor of any manufactured product we supply, and does not guarantee, underwrite, extend or assume the obligations of any OEM warranty. The product and performance warranties on your panels are Waaree's or Adani's; the warranty on your inverter is UTL's, Solaryaan's or Polycab's. Those warranties are governed entirely by the terms, conditions and exclusions in the certificate the manufacturer issues, and are subject to that manufacturer remaining in business and honouring them.

This is precisely why we specify established, ALMM-listed brands rather than whatever is cheapest in a given quarter. A thirty-year warranty is worth what the company behind it is worth.

What we do commit to

We are not the warrantor, but we are your route to it. For the entire warranty life of your system — not just the first year — we will register your claim, assemble the technical evidence pack the OEM requires, submit it, follow the file and keep you informed. **We do not charge for warranty coordination.**

At handover you receive the commissioning report, every OEM warranty certificate, a serial-number register of the installed equipment, the electrical layout and the operation and maintenance instructions. Keep them — a claim is filed against the serial number, and manufacturers will not log a complaint without the warranty document.

CLAUSE 9

OEM warranty periods

Indicative terms for the components we most commonly supply. The certificate issued against your serial numbers is the governing document.

COMPONENT	TYPICAL MAKES	PRODUCT WARRANTY (DEFECTS)	PERFORMANCE WARRANTY (OUTPUT)
Solar PV modules (panels)	Waaree, Adani and other ALMM/DCR-listed makes	10 – 12 years	25 – 30 years (typically 27 on the DCR series we most commonly supply)
On-Grid (grid-tied) inverter	UTL, Solaryaan, Polycab and similar	Up to 10 years, by brand and model — UTL 10 years on-site as standard; Polycab 5 – 8 as standard, extendable to 10 on several models	Not applicable
Hybrid inverter	UTL, Solaryaan and similar	5 years (typical)	Not applicable
Lithium battery bank	As specified in your work order	5 years (typical), subject to cycle-life conditions	Capacity retention per the OEM certificate
Mounting structure & BOS	Fabricated or sourced to specification	Per supplier terms; galvanising to the grade stated in the work order	Not applicable

COMPONENT	TYPICAL MAKES	PRODUCT WARRANTY (DEFECTS)	PERFORMANCE WARRANTY (OUTPUT)
Installation workmanship	Gurukrupa Powertech Solutions — our own warranty, not an OEM's	1 year from the date of commissioning	Not applicable

⚠️ A 30-year panel is not defect-covered for 30 years

This is the distinction the market routinely blurs, so we will be explicit. A solar module carries two clocks:

- The **performance warranty** (25 to 30 years) guarantees a minimum power output at points along a degradation curve — typically no worse than about 0.4 to 0.5% loss per year after the first.
- The **product warranty** (10 to 12 years) is the one that covers physical manufacturing defects: delamination, junction box failure, frame or cell defects.

A module that physically fails in year 15 is outside its product warranty even though its performance warranty still has 15 years to run. Any quotation that advertises “30 years warranty” without saying which one is quoting you the longer number.

🕒 Old stock can void a warranty before you switch it on

UTL states that its warranty is valid only where the **purchase date falls within 180 days of the manufacturing date** printed on the product or invoice. Other manufacturers apply comparable conditions. A unit that sat in a distributor’s godown for a year can therefore arrive with materially less cover than you were told, and you would have no way of knowing.

We supply current-production stock and the manufacturing date is verifiable on the equipment and on our purchase invoice. **Ask any installer for it** — including us — and register your product with the OEM promptly after commissioning. We do this registration for you as part of handover.

Official manufacturer warranty and service resources:

- **Waaree Energies** — Warranty statement, warranty registration and service support: web.waaree.com/documents/warranty-statement ↗ (https://web.waaree.com/documents/warranty-statement/)
- **Adani Solar** — Warranty certificate lookup — enter your module serial numbers to download the certificate that governs your system: [adanisolar.com/warranty-certificate](https://www.adanisolar.com/warranty-certificate) ↗ (https://www.adanisolar.com/warranty-certificate)
- **UTL Solar (a brand of Fujiyama Power Systems Limited)** — Product / warranty registration. UTL requires the product to be registered with its serial number and purchase invoice: [upsinverter.com/utl/register](https://www.upsinverter.com/utl/register/) ↗ (https://www.upsinverter.com/utl/register/)

- **UTL Solar — service** — Complaint and service-request portal. UTL states that uploading the warranty document is mandatory or the complaint is not logged: **[tracker.utsolar.net — complaint registration](https://tracker.utsolar.net/tracker/complaints/complaints_register.php)**  (https://tracker.utsolar.net/tracker/complaints/complaints_register.php)

These links are provided for your convenience and point to pages operated by the manufacturers, not by us. Their content, availability and the commercial terms published on them are controlled by the respective manufacturer and may change without notice to us. Warranty periods also vary by product series and by date of manufacture, so verify the term applicable to your own system against your own certificate.

CLAUSE 10

How a warranty claim actually works

The sequence, the realistic timeline, and which stages we control.

Report any suspected fault to us first, not to the manufacturer. We hold the commissioning record and the serial-number register, and a claim filed without the supporting technical evidence and the warranty document is usually returned unlogged.

STAGE	HANDLED BY	TYPICAL TIME	WHAT HAPPENS
You report the fault	You → Gurukrupa	Day 0	By phone, WhatsApp or email. Quote your commissioning report number if you have it to hand.
Acknowledgement & remote triage	Gurukrupa	Within 2 working days	We confirm receipt and try to establish over the phone whether the fault is the module, the inverter, a string connection or the grid supply.

STAGE	HANDLED BY	TYPICAL TIME	WHAT HAPPENS
Site inspection & evidence capture	Gurukrupa	2 – 7 working days	String and IV measurements, thermal or visual inspection, photographs, and capture of the affected serial numbers. No OEM will open a claim without this evidence pack and the warranty document.
Claim registered with the OEM	Gurukrupa, on your behalf	Same week as inspection	We file on the manufacturer's warranty or service portal, submit the evidence pack and the warranty certificate, and become your single point of contact for the file.

STAGE	HANDLED BY	TYPICAL TIME	WHAT HAPPENS
OEM technical evaluation	OEM — outside our control	15 – 30 days	The manufacturer assesses whether the failure is a covered manufacturing defect or an excluded cause. They may require the item to be shipped to their service centre, or may inspect on site.
Approval, dispatch & transport	OEM — outside our control	A further 7 – 15 days	If approved, replacement material is released and dispatched. Availability of the identical model governs this stage; an equivalent or superior model may be substituted where the original is discontinued.
Un-mounting, re-installation & re-commissioning	Gurukrupa	1 – 3 working days once material arrives	We remove the faulty unit, install the replacement, re-test the string and confirm the system is back to expected output.

🕒 Realistic end-to-end: roughly five to nine weeks

OEM technical evaluation takes 15 to 30 days from the date the claim is registered. If replacement is approved, **transportation and dispatch add a further 7 to 15 days**. With inspection and re-installation either side of that, a straightforward approved claim runs about five to nine weeks from your first call.

Those two OEM stages are indicative timelines published by the manufacturers, not commitments given by us. They stretch during peak season, at quarter-end, and where a product series has been discontinued and stock has to be located. We cannot accelerate them, and we do not accept liability for them — but we will tell you where the file actually stands whenever you ask.

Where a claim is rejected by the OEM, we will give you the manufacturer's stated reason in writing along with a quotation to replace the component at cost, so you can decide what to do with a complete picture.

CLAUSE 11

Who pays for what during a claim

"Free replacement" means free material. It has never meant free labour or free freight — here is the full breakdown, before you buy.

COST ITEM	BORNE BY	NOTES
Replacement module, inverter or part (claim approved)	OEM	Supplied free of cost by the manufacturer
OEM laboratory testing and technical evaluation	OEM	Borne by the manufacturer as part of the claim
OEM engineer visit, where the warranty is an on-site warranty	OEM	Applies to UTL on-grid inverters, which carry on-site cover as standard. Check your certificate — most module warranties are not on-site
Claim registration, evidence pack, OEM follow-up and paperwork	Gurukrupa	We do not charge for warranty coordination, at any point in the warranty life
Freight — site to OEM service point, and return of replacement	Customer	Charged at actuals; we will obtain the quote before booking

COST ITEM	BORNE BY	NOTES
Un-mounting the faulty component	Customer	Free of charge during the first year (our workmanship warranty)
Re-installation, re-wiring and re-commissioning labour	Customer	Free of charge during the first year (our workmanship warranty)
Our technician's site-visit charge	Customer	At our prevailing rate, after the first year. Quoted before the visit
Scaffolding, crane or any special access equipment	Customer	Only where the roof cannot be worked safely with standard access
Consumables — connectors, clamps, cable, sealant	Customer	At actuals
Generation lost while the system is down	Nobody	Not compensated by the OEM or by us. See clause 22

In short: **the OEM provides approved replacement material free of cost. You bear un-mounting, re-installation labour and transportation freight.** During the first year our workmanship warranty absorbs the labour and the visit; after that, standard service and visit charges apply and will be quoted to you before any work begins. We will not carry out chargeable work without your approval of the estimate.

One exception in your favour: on-site warranties

Where a component carries an **on-site** warranty, the manufacturer's own engineer attends your premises and that visit is the OEM's cost, not yours. UTL on-grid inverters carry on-site cover as standard, with tiered support that starts remotely before an engineer is dispatched.

Module warranties are generally **carry-in**, which is why the freight line above falls to the customer. Check which type applies to each component — it is stated on your certificate, and we will confirm it in writing at handover.

CLAUSE 12

Worked examples — a panel claim and an inverter claim

Two residential scenarios, day by day, with every cost attributed. They behave differently, and the difference is worth understanding before you need it.

Example A — solar panels, 3 kW On-Grid system in Bhuj, year 6

The customer notices generation down roughly a third against the same month last year. They call us on a Monday.

- **Day 0.** Fault reported by phone. We log it against the commissioning record.
- **Day 2.** Remote triage rules out an inverter fault and a grid supply issue — the inverter is reporting low string voltage on one of two strings.
- **Day 5.** Site visit. String and IV measurements confirm two modules underperforming well outside the warranted degradation curve. We photograph them, capture the serial numbers, and record the readings. *Site visit charged at our standard rate, as year one has passed.*
- **Day 7.** Claim registered with the module OEM; evidence pack and warranty certificate submitted.
- **Day 7 – 37.** OEM technical evaluation — **15 to 30 days.** The manufacturer requires the two modules to be shipped to their service centre. *Freight to the service centre is borne by the customer.* We arrange transport and share the quote first.
- **Day 37.** Claim approved as a manufacturing defect.
- **Day 37 – 50.** Replacement modules released and dispatched — **7 to 15 days.** *Return freight is borne by the customer.* The original series is discontinued, so a current-generation module of equal or higher rating is supplied — standard practice, and permitted under the warranty.
- **Day 52.** Our technician un-mounts the faulty modules, installs the replacements, re-terminates and re-tests the string, and confirms output. *Un-mounting, re-installation labour and the visit charge are borne by the customer.* The two replacement modules themselves cost the customer nothing.

Example B — on-grid inverter, 5 kW system, year 4, UTL unit under on-site warranty

The system stops exporting overnight. The inverter display shows a fault code and generation has gone to zero — a total outage rather than a gradual decline.

- **Day 0.** Fault reported. We check whether the grid supply and the AC isolator are healthy before touching the inverter.
- **Day 1.** Remote triage. The manufacturer's support runs in tiers — chatbot, then a WhatsApp video call with their engineer — and a good proportion of inverter faults are resolved at this stage without anyone attending. *No cost.*
- **Day 2.** Not resolved remotely. We register the complaint on the OEM's service portal with the serial number, installation date and the warranty document, which the manufacturer requires before the complaint will be logged at all.
- **Day 4 – 10.** The manufacturer's service engineer attends site under the on-site warranty. *This visit is the OEM's cost, not yours* — the main practical difference from Example A.
- **Day 10 – 40.** The board is found faulty and the unit is taken in for evaluation — **15 to 30 days**. Where the unit must go to the factory rather than a regional service centre, this is the stage that stretches.
- **Day 40 – 52.** Repaired or replaced unit dispatched — **7 to 15 days**. Under an on-site warranty the freight on the unit is generally the manufacturer's; under a carry-in warranty it would be yours. Confirm which applies from your certificate.
- **Day 53.** Re-installation, re-configuration of the grid settings, and re-commissioning. *Our labour and visit charge apply, as year one has passed* — unless the OEM engineer completes the refit under the on-site warranty, in which case there is nothing for us to charge.

Note the two differences that matter. An inverter failure stops **all** generation, so downtime costs you more than two weak modules do — report it the same day. And because the inverter is the component most likely to need replacing within the system's life, its warranty type and length deserve more of your attention at quotation stage than the panel headline number usually gets.

CUSTOMER TYPICALLY PAYS

Freight on carry-in items, un-mounting and re-installation labour, our visit charge after year 1

OEM PAYS

Replacement material, testing and evaluation, and the engineer visit where cover is on-site

WE CHARGE NOTHING FOR

Claim filing, evidence pack, portal registration and OEM follow-up — for the life of the warranty

Both examples are illustrative. Actual timelines and costs depend on the manufacturer, the component, stock availability, your site's accessibility and the distance to the nearest service point. They are set out here so that nobody discovers the shape of it for the first time in year six.

CLAUSE 13

What OEM warranties do not cover

Every product warranty in this market covers manufacturing defects. None of them cover the events below — this is universal, not particular to us.

Weather & natural events

- Hailstorm, cyclone, high wind and storm damage
- Lightning strike and the surge that follows it
- Flood, waterlogging and earthquake
- Fire, whether or not it originated on your property

Animals, birds & external impact

- Monkeys, birds, rodents and other animals breaking glass, displacing modules or chewing cabling
- Falling branches, construction debris, stones and thrown objects
- Theft, vandalism, riot and malicious damage
- Damage caused by anyone walking on the modules

Grid & electrical supply

- Voltage surges, spikes, sags and fluctuation originating in the PGVCL grid
- Neutral failure, phase imbalance and incorrect earthing not carried out by us
- Damage from a DG set or any other source connected without our sizing approval
- Operating the system outside the voltage and temperature envelope in the OEM manual

Handling, modification & neglect

- Repair, opening or modification by anyone other than the OEM or a Gurukrupa technician
- Relocation of the array to a different site or roof
- Abrasive cleaning, detergents, scrapers, or washing hot glass with cold water
- Shading introduced after commissioning — new construction, a water tank, or a tree left to grow
- Removal, defacing or loss of the serial-number label, which is what the claim is filed against

Also excluded across the board: normal, warranted degradation of output over time; cosmetic marking that does not affect performance or safety; consumables and wear items; and cover voided by conditions in the OEM's own certificate, such as the purchase-to-manufacture window described in clause 9. Our own one-year workmanship warranty carries the same exclusions — it covers our work, not events acting on it.

CLAUSE 14

Insurance — how you close the gap

A rooftop solar system is a lakh-scale asset sitting outdoors in a region that gets cyclones, hail and dust storms. Warranty is not insurance, and it was never designed to be.

We strongly advise every customer to arrange **All-Risk cover for the solar installation**, either as an add-on endorsement to an existing householder's or fire policy, or as a standalone policy. For commercial sites, extend the existing property or industrial policy to name the rooftop asset explicitly.

Cover worth asking your insurer about specifically:

- Storm, cyclone, hail and wind damage — the primary exposure on the Kutch coast.
- Lightning strike and consequential electrical surge damage to the inverter.
- Theft of modules and cabling, and malicious damage.
- Impact damage, including from animals and birds.
- Flood and inundation, where the inverter or LT panel is at a low level.
- Loss of generation / business interruption, if the site is commercial.

We do not sell insurance

Gurukrupa Powertech Solutions is not an insurance intermediary, is not licensed to advise on insurance, and receives no commission from any insurer. This clause is a technical recommendation about a real, uncovered risk, not a financial recommendation. Speak to your own insurer or a licensed broker, and read what the policy actually excludes. We are happy to supply the technical asset details, invoice values and commissioning documentation your insurer will ask for.

CLAUSE 15

Net metering & PGVCL approvals

We prepare and file your application and stay on the file to completion. We do not control the outcome or the timeline, because neither belongs to us.

Rooftop solar with net metering is a permissioned activity. The sequence is fixed: register the application, obtain technical feasibility approval from PGVCL, install only after that approval, then apply for inspection, then meter installation and the net metering agreement. We handle the paperwork at each stage.

What sits outside our control, and therefore outside our liability:

- **Feasibility rejection or capacity reduction.** PGVCL assesses your sanctioned load, connection phase and whether the distribution transformer serving you has headroom. A refusal is usually about network capacity, not about you or about us.
- **Scheduling of inspection.** The queue is set by the DISCOM and lengthens during periods of high scheme uptake.
- **Bidirectional meter availability.** The net meter is supplied, installed, sealed and owned by PGVCL. Meter shortages are a recurring reality in Gujarat and can hold a completed installation for weeks. No installer can fit this meter themselves, and anyone offering to has misunderstood the process.
- **Changes to regulation.** GERC tariff orders, settlement rules, capacity caps in relation to sanctioned load, and DISCOM procedure can change during your project.
- **DISCOM charges.** Application, processing, meter, testing and security deposit charges are levied by PGVCL and are payable by you.

Where the connection is not in your name, or the sanctioned load is inadequate, those must be corrected with PGVCL before the solar application can proceed. That is its own timeline and it sits with the consumer, though we will tell you exactly what is needed and help you assemble it.

CLAUSE 16

PM Surya Ghar subsidy

The subsidy is a payment from the Government of India to you. It does not pass through us at any point.

For eligible residential rooftop systems, Central Financial Assistance under the PM Surya Ghar: Muft Bijli Yojana is credited **directly to the consumer's own bank account by the Government of India** after the DISCOM has inspected the installation, installed the net meter and the commissioning details have been submitted on the national portal.

We register the application, install as the declared vendor on your portal application, submit the commissioning details and stay with the file through to the credit landing. That is the extent of what any installer can do.

⚠ **What we cannot be liable for**

- Delay in disbursement, whatever its cause or duration.
- Technical failures, downtime, data errors or processing backlogs on the national portal.
- Revision, reduction, suspension or withdrawal of the scheme, or changes to the slab amounts, after your order is placed.
- Rejection arising from information you supplied — an incorrect or unlinked bank account, a name mismatch, or a connection not held in the applicant's name.
- Exhaustion of scheme funds or budgetary allocation for the period.
- Any change in eligibility rules between quotation and commissioning.

Eligibility conditions we will confirm with you in writing before order: the connection must be a domestic one held in the applicant's name; the system must use DCR-compliant modules; it must be installed by a vendor registered on the national portal; it must be net-metered through the DISCOM; and the subsidy is claimable once per eligible residential connection. Commercial, industrial and agricultural connections are outside the scheme entirely.

Any subsidy amount shown in our estimates or proposals is the amount you are expected to be eligible for under the scheme as it stands on the date of the document. It is an illustration of your net cost — not a discount we are giving, not a sum we hold, and not an amount we guarantee you will receive.

CLAUSE 17

Generation, savings & EMI figures

Generation figures are engineering estimates based on long-run irradiance data for Gujarat. They are not a guaranteed output.

Actual generation varies with weather in a given year, dust accumulation between cleanings, ambient temperature, shading that develops after commissioning, grid availability, and how promptly faults are reported. A system performing within the expected band across a year may still be below estimate in any single month.

Savings, payback period and return-on-investment figures shown on this website or in our proposals additionally assume that tariffs, consumption patterns and net metering settlement rules stay broadly as they are. They are illustrative planning figures, not a financial guarantee, and they are not investment advice.

EMI and finance figures shown by our calculators are arithmetic illustrations at an assumed rate and tenure. Gurukrupa Powertech Solutions is not a bank, an NBFC, a lending agent or a direct selling agent, and we neither arrange nor underwrite credit. Any loan is a contract between you and your lender on the terms they offer after their own appraisal, and their sanctioned rate, tenure, processing fee and eligibility will govern — not our illustration.

Where the OEM performance warranty is engaged — that is, where measured output falls below the manufacturer's warranted curve — the remedy is the one set out in that OEM warranty, claimed through the process in clause 10.

CLAUSE 18

Your obligations

A few things only you can do, most of which affect whether a warranty stays valid.

- Provide accurate information — bill data, sanctioned load, ownership documents and bank details. Applications fail most often on a detail supplied at the start.
- Provide safe access to the roof and site during installation and service, plus a water point and a temporary power supply during installation.
- Ensure the roof and any structure we mount on are structurally sound. We survey for suitability; we do not certify the building.
- Clean the modules as advised — plain water, soft brush, early morning or after sunset, no detergent, no abrasive pads, never onto hot glass. Do not walk on the modules.
- Keep the array free of new shading, and keep the inverter area dry, ventilated and accessible.
- Do not modify, extend, relocate or repair the system, or have anyone other than us or the OEM work on it. This voids both the OEM warranty and ours.
- Retain your warranty certificates, commissioning report and serial-number register. Manufacturers will not log a claim without the warranty document.
- Report faults promptly. A fault left running can turn a covered defect into an excluded consequential failure.
- Keep your DISCOM account current — net metering is tied to the connection, and a disconnected or transferred connection interrupts the arrangement.

CLAUSE 19

If you sell the property

The system stays with the building, and so — with conditions — does its warranty.

- **OEM warranties generally transfer.** Manufacturers typically assign the remaining warranty term to a subsequent owner, provided the equipment stays at its original installation site and has not been tampered with, removed or re-installed. Removing the array and re-erecting it elsewhere generally ends the warranty — check the certificate before you plan any relocation.
- **Net metering follows the connection.** The arrangement is tied to the electricity connection, so the buyer must complete the DISCOM's standard name-change process, and the net metering

agreement is updated into the new consumer's name as part of it. Administrative rather than difficult, but an agreement left in a former owner's name causes problems at settlement time.

- **The subsidy does not transfer, and is not repayable on sale** in the ordinary course — but it is claimable only once per eligible connection, so a buyer cannot claim it again on the same connection.
- **Hand over the documents.** Give the buyer the commissioning report, warranty certificates and serial-number register. Without them a future claim is very difficult to file.
- **Tell us.** Let us know the new owner's details so our service records stay accurate and we can support them. Our own workmanship warranty, if still running, continues for its remaining term at the same site.

CLAUSE 20

How we contact you, and photography at your site

Two consents worth stating plainly, because most companies bury both.

Contacting you. When you give us your number through the quotation tool, a contact form, or in the course of a project, you consent to us contacting you by phone, SMS, WhatsApp and email about that enquiry or project — **including where your number is registered under the DND / NCPR preference** maintained under the TRAI Telecom Commercial Communications Customer Preference Regulations. This consent is for service and transactional communication about your own enquiry, not for bulk marketing, and you can withdraw it at any time by telling us to stop. We will.

Photography. We photograph completed installations for our project records, for quality control, and for the portfolio on this website. Where such a photograph is published we do not publish your name, your full address or your contact details alongside it — location is shown no more precisely than the town or village.

- You may decline site photography for publication, before or after installation, and we will honour it — tell the site engineer or write to us.
- Ask us to remove an already-published photograph of your site and we will take it down.
- We will not use your name, a testimonial, or a recognisable identification of you in marketing without asking you first.

Both consents are covered in more detail, along with everything else we collect, in our [Privacy Policy](#).

CLAUSE 21

Force majeure

Neither party is liable for failure or delay in performance caused by events beyond its reasonable control.

These include, without limitation: acts of God, cyclone, storm, hailstorm, flood, earthquake, lightning and fire; epidemic and pandemic; war, riot, civil commotion and terrorism; strikes, lockouts and labour disputes; failure or interruption of the grid supply; acts, orders, restrictions or delays of any government, regulatory body or distribution licensee; changes in law, duty, tariff or import policy; port congestion, transport disruption and shortage of materials in the wider market; and failure of a manufacturer or supplier to deliver for reasons of the same kind.

The affected party will notify the other without undue delay and both will use reasonable efforts to resume performance. Where the event continues for a prolonged period, either party may terminate the affected work, and amounts will be settled for work actually performed and materials actually procured to that date.

CLAUSE 22

Limitation of liability

What we are responsible for, and the limits of it.

To the maximum extent permitted by applicable law, and subject to the paragraph below, Gurukrupa Powertech Solutions is not liable for:

- Indirect, incidental or consequential loss, including loss of generation, loss of expected savings, loss of profit or loss of business.
- Delay or non-performance by any OEM, DISCOM, government portal or statutory authority.
- Any amount payable or not payable to you under a government subsidy scheme.
- Reliance on a website estimate as though it were a firm quotation, or on generation, savings or EMI figures as though they were guarantees.
- Damage arising from a cause excluded under clause 13, or from your failure to observe clause 18.
- Interruption, error or unavailability of this website or the quotation tool.

Our aggregate liability arising out of or in connection with an installation is limited to the value of the contract for that installation.

Your statutory rights are not affected

Nothing in these terms excludes or limits liability for death or personal injury caused by our negligence, for fraud or fraudulent misrepresentation, or for anything else that cannot lawfully be

excluded. In particular, **nothing here restricts your rights as a consumer under the Consumer Protection Act, 2019** or your right to approach the appropriate consumer forum. Where any clause on this page is found unenforceable, it is severed and the rest continues to apply.

CLAUSE 23

Cancellation, changes & refunds

Where an order is cancelled or altered after acceptance.

- **Before procurement.** If you cancel before we have placed component orders, amounts paid are refunded less documented costs actually incurred — survey, design and application fees.
- **After procurement.** Once material has been ordered, allocated or delivered, refunds are net of the cost of that material, any supplier restocking or cancellation charge, freight, and work already performed. Custom-fabricated structures are non-returnable.
- **Changes in scope.** Any change you request after order — capacity, brand, mounting configuration or location — is priced as a variation and may reset the timeline and the PGVCL application.
- **Cancellation by us.** We may withdraw from an order where the site is found unsafe or unsuitable, where required approvals are refused, or where agreed payments are not met. In the first two cases, amounts paid are refunded less costs actually incurred.
- **Statutory charges.** Fees already paid to PGVCL or any authority on your behalf are not refundable by us, as they are not held by us.
- **Refund method.** Refunds are made to the account from which payment was received, within a reasonable period of the amount being agreed.

CLAUSE 24

Website use & intellectual property

What you may and may not do with the material on this site.

All content on this website — text, photographs of our own installations, design, the sizing and pricing logic behind the quotation tool, and the Gurukrupa Powertech Solutions name and branding — is our property or is used under licence. You may read, print and share it for your own non-commercial use in evaluating a solar purchase.

You may not reproduce, republish or adapt it commercially, scrape or systematically extract data from it, reverse-engineer the calculation logic, or use it to train an automated system, without our

prior written permission. Manufacturer names and marks referred to here belong to their respective owners and are used to identify the equipment we supply.

Do not use the quotation tool to submit false information, someone else's contact details, or automated or bulk requests.

CLAUSE 25

Grievance redressal

If something has gone wrong, this is the route — and it is a short one.

Raise it with us first, in writing, at sagarbhimani001@gmail.com or by calling [+91 97259 76717](tel:+919725976717). Include your name, site address, commissioning date and a description of the problem.

- **Acknowledgement** within 2 working days.
- **Substantive response** — our assessment and what we propose to do — within 15 working days, or a status update within that period where a third party such as an OEM or PGVCL is involved and has not yet responded.
- **Escalation.** If you are not satisfied, ask for the matter to be escalated to the proprietor, marking your email "Escalation".

This process does not limit your right to approach the appropriate consumer forum under the Consumer Protection Act, 2019, at any stage.

CLAUSE 26

Governing law & disputes

Indian law applies, and the courts at Bhuj have jurisdiction.

These terms and any contract formed under them are governed by and construed in accordance with the laws of India. Subject to the paragraph below, the courts at Bhuj, Kutch, Gujarat have exclusive jurisdiction over any dispute arising out of or in connection with them.

The parties will first attempt to resolve any dispute through the grievance process in clause 25, and thereafter by good-faith discussion, before commencing proceedings. Nothing in this clause restricts a consumer from approaching the District, State or National Consumer Disputes Redressal Commission having jurisdiction, as provided by the Consumer Protection Act, 2019.

CLAUSE 27

Changes to these terms & contact

We update this page as our practice, our supplier terms and the applicable rules change.

The effective date and version number at the top reflect the current revision. Continued use of this website after an update constitutes acceptance of the revised terms. **Changes made after your work order is signed do not alter that work order** — your contract is the version in force on the date you signed it, and we will keep a copy of it.
